

Getting Started

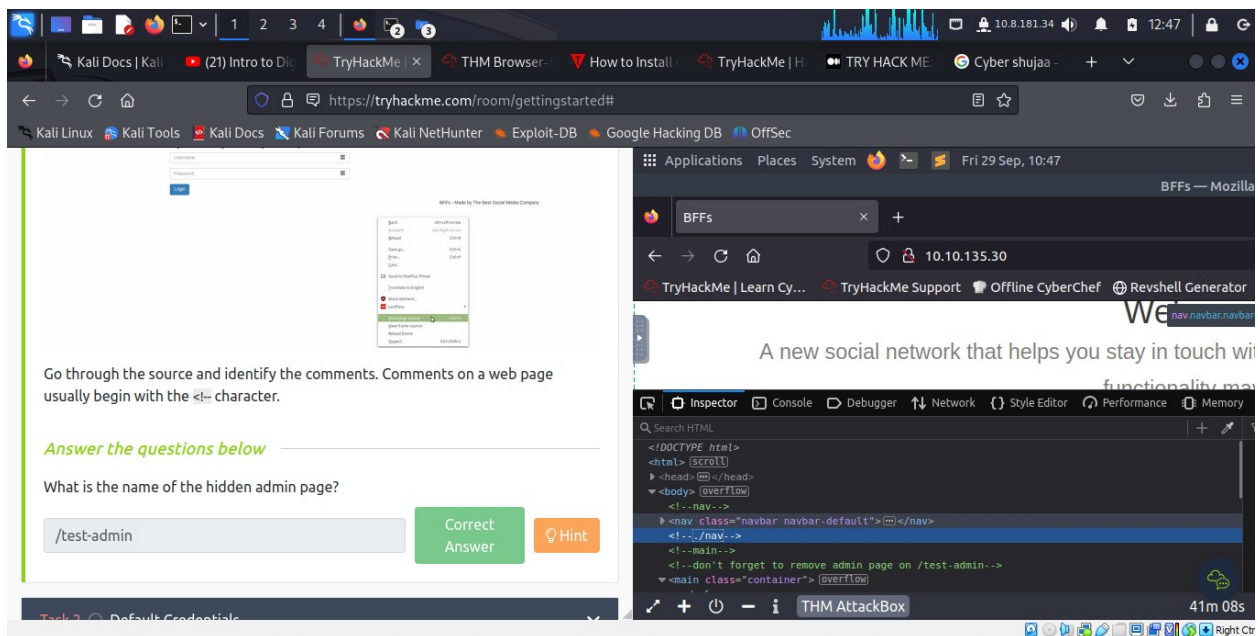

Introduction

This sub task introduces the learner to the practical knowledge of Cyber Security by going through a series of what is called rooms for a special skill particularly.

Activities

Task 1: Introduction

This section outlines objectives such as the social media site to be attacked using a virtual machine, the location of the site.

Task 2: Default Credentials

This sub task assesses common misconfiguration of the web application by searching for default credentials or by giving a guess.

2. Modify users' profiles and data.

If a website has not been configured correctly, there is a chance that there remain default credentials in the platform that the developers forgot to remove. We can search for the default credentials depending on the platform used. Sometimes these are typically easy to guess. Some common username and password combinations (in the format username:password) are:

- admin:admin
- admin:password
- administrator:password123

To proceed, try using these default credentials to access the administrator portal.

Answer the questions below

What is the username and password in the form username:password?

admin:admin Correct Answer

How many user are signed up to the application?

Answer format: * Submit

Woop woop! Your answer is correct.
